Winter Sleep

In winter countries, where the winters are not very long or very cold, hibernation is not necessary. And in very cold parts of the world, like the far north of Russia, not many animals hibernate or go into a state of deep sleep for the winter months; the ground is so hard that they cannot make a deep hole to spend the winter in. But animals in a large part of the northern hemisphere (that is, Northern Europe, Northern America, most of Asia and northern parts of Africa) spend every winter fast asleep.

They go to sleep in all kinds of places. Red squirrels disappear inside trees; bears use caves, hedgehogs can hibernate in piles of dead leaves, frogs go deep under the mud, and very many other animals dig tunnels in the earth. A good many animals sleep under the snow; there is a lot of air in loose snow, and this helps to keep the cold out.

Some warm-blooded animals, like the cat, the dog or the wolf, do not need to hibernate; they lead an active life which keeps up their usual body temperature even in very cold winter weather. But for a cold-blooded creature such as frog or a snake it is a different matter. When the air temperature is below freezing, the creature's blood temperature drops too; it can't move about in the usual way. Then it has no choice: it must simply lie down and sleep. To do that, it must find a place where it can keep fairly warm; and it must be a place where its enemies cannot find it.

Hibernation is more than a sleep. It is a very deep sleep. The animal's temperature drops to just over 0° C, and its heart beats very slowly. People who find hibernating animals asleep often think that they are dead: the body feels so cold, and the creature may breathe only once every five minutes. A hibernating animal can't feel any pain; you can touch it, or even give a hard pull to its tail, without causing it to move or wake up. In its hibernating state it can even live in a poisonous atmosphere for a long time without any bad effects.

शीत निद्रा

शीत देशों में, जहाँ सर्दी बहुत ही लंबी या बहुत ही ठंडी नहीं होती है, वहाँ शीत निद्रा आवश्यक नहीं होता है। दुनिया के बहुत ही ठंडे भागों, जैसे कि रूस का सुदूर उत्तरी भाग, में सर्दियों के महीनों में कई जानवर हाइबरनेट या गहरी नींद की स्थिति में नहीं जाते हैं; क्योंकि इन स्थानों की भूमि इतनी कठोर होती है कि वे सर्दी बिताने के लिए गहरे छिद्र नहीं बना सकते हैं। लेकिन उत्तरी गोलार्द्ध (यानी, उत्तरी यूरोप, उत्तरी अमेरिका, एशिया और अफ्रीका के उत्तरी हिस्सों का अधिकांश भाग) के बड़े भाग में जानवर प्रति वर्ष सर्दी में सोकर समय बिताते हैं।

वे सभी प्रकार के स्थानों में सोने के लिए जाते हैं। लाल गिलहरी पेड़ के अंदर गायब हो जाते हैं; भालू गुफाओं का उपयोग करते हैं, हेज़होग मृत पत्तियों के ढेर में हाइबरनेट कर सकते हैं, मेंढक मिट्टी के नीचे गहराई में चले जाते हैं और बहुत से अन्य जानवर धरती में सुरंग खोद कर रहते हैं। कई सारे जानवर बर्फ के नीचे सोते हैं; ढीली बर्फ में ढेर सारी हवा होती है और इससे ठंड से बचने में मदद मिलती है।

कुछ गर्म खून वाले जानवर, जैसे कि बिल्ली, कुत्ते या भेड़िये को हाइबरनेट करने की आवश्यकता नहीं पड़ती है; वे एक सक्रिय जीवन जीते हैं जो सर्दियों के मौसम में भी अपने शरीर के तापमान को सामान्य स्थिति में बनाए रखते हैं। लेकिन ठंडे खून वाले प्राणी जैसे कि मेंढक या सांप के लिए एक अलग स्थिति होती है। जब हवा का तापमान ठंड से काफी कम होता है, तो प्राणी के खून का तापमान भी कम हो जाता है; यह सामान्य तरीके से कम नहीं हो सकता है। फिर, कोई विकल्प शेष नहीं बचता है: तो वे सीधे लेटकर सो जाते हैं। ऐसा करने के लिए, उन्हें एक ऐसी जगह मिलनी चाहिए जहाँ वह खुद को काफी गर्म रख सके; और यह एक ऐसा स्थान होना चाहिए जहाँ उनके दुश्मन उन्हें नहीं ढूँढ़ सकें।

हाइबरनेशन निद्रा से कहीं अधिक होता है। यह बहुत ही गहरी निद्रा है। जानवर का तापमान जब 0° C से अधिक हो जाता है, तो उसका दिल बहुत ही धीरे-धीरे धड़कने लगता है। जो लोग हाइबरनेट करते हुए जानवरों को सोते हुए पाते हैं, उन्हें अक्सर लगता है कि वे मर चुके हैं: शरीर बहुत ही ठंडा महसूस होने लगता है और प्राणी हर पाँच मिनट में केवल एक बार ही सांस ले सकता है। हाइबरनेट करने वाले जानवर को कोई दर्द महसूस नहीं हो सकता है; आप इसे स्पर्श कर सकते हैं या यहाँ तक कि उस जानवर की पूँछ को कसकर खींचने के बाद भी उसको हिलाया या जगाया नहीं जा सकता है। अपनी हाइबरनेट की स्थिति में यह बिना किसी बुरे प्रभाव के लंबे समय तक एक जहरीले वातावरण में रह सकता है।

While most people would argue having a life you love will make you happy whereas some would say that happiness will help you to create a life you love. So, it depends on you what you choose and how you make yourself happy with the life you have. Here are some of the things that you should follow as a reminder to keep yourself motivated and positive. Exercise more. Exercising makes you feel good so that you are always in a better mood after a workout or simply a walk to the supermarket. You will never see someone in a bad mood after they have done an intense workout. Positive thinking affects your performance. Positive thinking raises energy levels, creativity and productivity. Looking towards to something with full confidence and positiveness makes things possible in your own terms and conditions. Trash your negative thoughts. Some people are overwhelmed by their negative thoughts and they have real problems in getting rid of them. A study found that by actually writing these thoughts down on a piece of paper and then destroying them is effective. The fact of discarding them physically does help in reducing their effects. Psychologists suggest doing this on a regular basis. Treasure your experiences more than your feature. A psychologist has done quite a lot of research as to why it is better to treasure memorable and pleasant experiences rather than the material things we buy. Comparing experiences and looking at better objects after purchase can be discouraging and ruin the actual pleasure we get while purchasing new things. Write down about your gratefulness. Feeling and thinking about the things you are grateful for as you wake up is a great way to build more happiness. Research on brain shows that you always tend to focus on the negative things of life like those worries, tragedies, failures, and discontent. Negativity is the failure position. Practice mindfulness. Mindfulness means that you concentrate and pay full attention to the present moment and accept it without judging it. If

you do it regularly, it can decrease your stress levels and lead to a better quality of life. Focus on the present moment means that can give a meaning to your life. Concentrate on the joy they are giving you. It is really effective in forgetting about the past and not thinking about future. Don not forget your beauty sleep. When you do not get enough sleep, your negativity takes a big place. The researchers found that the hippo campus which is the part of the brain which increase your positive thoughts. When you sleep, this function starts and negative thoughts muscle in much more than before. Researchers have found that when you dedicate a little time or money to helping others this gives a significant effect on our own happiness. All these eight ways are scientifically proven to help you feel happy. If you think your life is full of responsibilities and you are too late to live a different life then these points will definitely help you to overcome the situation.
